

depressible buttons,

wherein the improved method includes the step of depressing one of the buttons to send a signal, regardless of the cursor position on the display, to network browsing or navigating software for commanding display of a previously visited address.

23. An improved method of browsing or navigating a network according to claim 22 further including a step of depressing one of the buttons to send a signal, regardless of the cursor position on the display, to network browsing or navigating software for commanding display of a most recent previously visited address.

REMARKS

The above claims are believed patentable over the prior art, and allowance thereof is respectfully solicited.

I hereby declare that all statements made herein of my own knowledge are true and that all statements made on information and belief are believed to be true; and further that these statements were made with the knowledge that willful false statements and the like so made are punishable by fine or imprisonment, or both, under Section 1001 of Title 18 of the United States Code and that such willful false statements may jeopardize the validity of the application or any patent issued thereon.

Respectfully:

 Date: June 15, 1999
Brad A. Armstrong, Inventor / Applicant
